practical

To get the most out of your two-way radio investment you need high power to get maximum range and better on-site coverage. Unlike license free radios (PMR446) that are limited to only 0.5 watt power, the Motorola GP Professional Series, delivers up to an amazing 5 watts in VHF and 4 watts in UHF, more than enough to keep your business talking by avoiding unheard, broken up and missed calls. Choose the GP320 when the communication you want needs to be simple and effective.

Operator-friendly controls and user features include :

• **X-PAND VOICE COMPRESSION AND LOW LEVEL EXPANSION**

Provides crisp, clear and strong audio quality in virtually any noisy environment. Low level expansion allows further improvements in audio quality by reducing noise heard during pauses in conversation.

• **WHISPER**

Allows a user to speak quietly into a radio and still be heard clearly by other radio users.

• **VOICE OPERATED TRANSMIT**

Allows total hands-free operation with a headset accessory when the radio is carried on a belt or shoulder strap.

• **SIGNALLING**

The radio software encompasses CTCSS and Selcall as standard.

• **LONE WORKER**

Using Selcall signalling, the radio enters emergency mode if the user does not respond to a warning call, adding security and safety for individuals who work remotely from their team.

• **EMERGENCY SIGNALLING**

Sends a Selcall help signal to a pre-defined person or group within the team.

• **CALL FORWARD**

Allows calls to be forwarded onto another radio or radios, using Selcall, if calls cannot be answered personally.

• **ADJUSTABLE POWER LEVELS**

The radio's output power has two settings: low power extends battery life and high power allows the radio to transmit over greater distances.

• **TIME OUT TIMER**

Limits the amount of time a user has to continuously transmit. This allows for more efficient use of the channel.

• **LIGHTWEIGHT**

Weighing only 420 gms with the standard Nimh high-capacity battery means the radio is easy to carry without fatigue.

• **ACCESSORIES**

A full range of audio/ mic and battery options allows easy customisation for all applications

• **IN-BUILT RUGGEDNESS**

Built to MIL STD 810 C/D/E and IP54 ensure a long working life, even in the toughest conditions.

• **INTRINSIC SAFETY OPTION**

Factory Mutual approved when safety is not an option.
