

Used by over 165 Hospitals, Age Care Centres and Universities across The United Kingdom, Australia and New Zealand

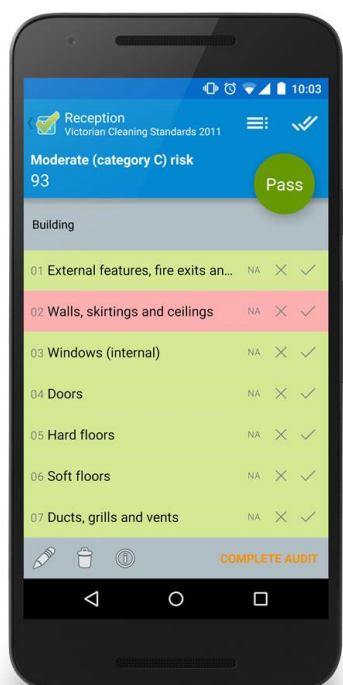

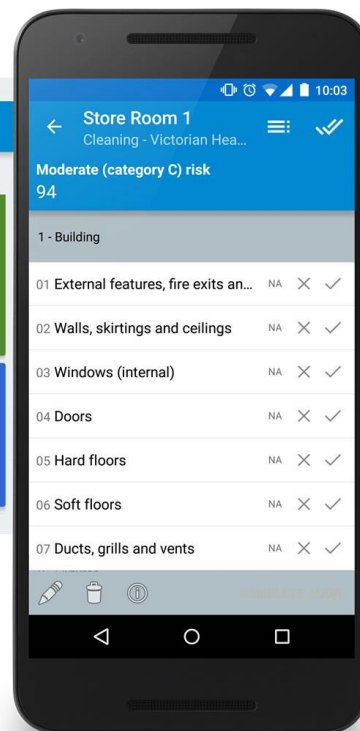

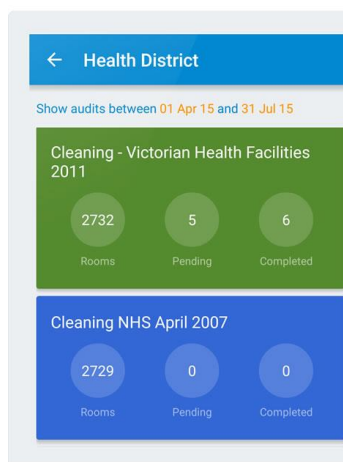

Compliance Auditing & Reporting Made Easy

Auditing is an integral part of any compliance regime, whether for statutory reporting purposes or internal measurement and benchmarking. TopCat makes it easy to complete audits in an efficient and orderly manner, minimising the time investment while recording important information and capturing details to support findings and observations. Reporting with TopCat is also quick and easy, providing data that measures performance, identifies rectification requirements and increases the effectiveness of auditing as a management tool to improve outcomes.

TopCat is a paperless monitoring (audit / compliance / checklist) system which can reduce auditing and reporting time by over 50%.

Devices will show audits for a user based on log-in credentials, allowing auditors to focus only on their own responsibilities.

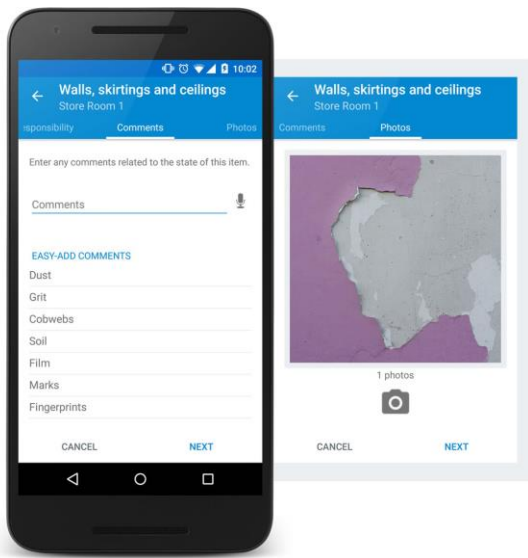

Recurring audits can be set to a frequency relevant to risk level or another user scheduling basis.

A smart device's standard features make adding notes or attaching photos a breeze.

Modern technology maximises efficiencies and provides auditors with the capability to instantaneously file audit reports, even on widely dispersed audit locations.

Undertaking audits is quick and easy, enabling new and infrequent users to audit with minimal training.

Failing Elements

Comments and evidence can be recorded on the fly.

TopCat supplies the tools to record details quickly from easy add lists, the keypad, spoken into the microphone or by adding photos. The auditor can even highlight the issue within a photo to ensure complete clarity.

Responsibility can be assigned for rectification, making it simple and easy to notify the relevant team or individual for corrective action.

Reporting

Reporting is available using a suite of reports developed over more than 10 years.

Information can be exported in .csv format for use with other databases and reporting tools.

A dashboard is available to keep up to date with the current status of audits and to highlight those requiring completion within upcoming deadlines.

Group Structures

TopCat is used by a number of groups to achieve consistency regarding:

- Approach to audit questions, frequency and timing of audits
- Reporting
- Measurement and benchmarking of results

Secure & Stable Infrastructure

An important aspect of TopCat is that the database and software reside on the user's own network and devices. This ensures the same level of security and support is afforded to the TopCat system as is provided by the user's IT department for any other user IT system.

TopCat Innovation

TopCat is an innovative way in which your business can improve the auditing and reporting process, whether for internal or external compliance needs.
